Dear Parent or Guardian,

This **Media Release Form** is presented to you because your child's photograph and video may be taken during athletic events for use in the local media to highlight the athletic programs of the Interscholastic Sports Association. Your permission is needed in order for his/her photograph and or videos to be published. Please complete the information below and have your child return this form prior to attending his/her first practice for school year 2026-2027.

The waiver is **HIGHLY RECOMMENDED** for your child to obtain the full experience of competition. Schools and local media may use the footage to recognize your child for their hard work during the season. Keep in mind that participation in high school sports is voluntary – should the school team and ISA contract for a highly publicized event, your child may not be able to participate without the waiver form.

Concussion Information Sheet

A concussion is a brain injury and all brain injuries are serious. They are caused by a blow, a bump, or a jolt to the head, or by a blow to another part of the body with the force transmitted to the head. They can range from mild to severe and can disrupt the way the brain normally works. Even though most concussions are mild, **all concussions are potentially serious and may result in complications including prolonged brain damage and death if not recognized and managed properly.** In other words, even a “ding” or a bump on the head can be serious. You can’t see a concussion and most sports concussions occur without loss of consciousness. Signs and symptoms of concussion may show up right after the injury or can take hours or days to fully appear. If your child reports any symptoms of concussion, or if you notice the symptoms or signs of concussion yourself, seek medical attention right away.

Symptoms may include one or more of the following:

Concussion Information Sheet

What can happen if my child keeps on playing with a concussion or returns to soon?

Athletes with the signs and symptoms of concussion should be removed from play immediately. Continuing to play with the signs and symptoms of a concussion leaves the young athlete especially vulnerable to greater injury. There is an increased risk of significant damage from a concussion for a period of time after that concussion occurs, particularly if the athlete suffers another concussion before completely recovering from the first one. This can lead to prolonged recovery, or even to severe brain swelling (second impact syndrome) with devastating and even fatal consequences. It is well known that adolescent or teenage athlete will often under report symptoms of injuries. And concussions are no different. As a result, education of administrators, coaches, parents and students is the key for student-athlete's safety.

If you think your child has suffered a concussion

Any athlete even suspected of suffering a concussion should be removed from the game or practice immediately. No athlete may return to activity after an apparent head injury or concussion, regardless of how mild it seems or how quickly symptoms clear, without medical clearance. Close observation of the athlete should continue for several hours. The GDOE ISA requires implementation of well-established return to play concussion guideline that has been recommended for several years:

“A student-athlete who is suspected of sustaining a concussion or head injury in a practice or game shall be removed from competition at that time and for the remainder of the day.”

and

“A student-athlete who has been removed may not return to play until the athlete is evaluated by a licensed health care provider trained in the evaluation and management of concussion and received written clearance to return to play from that healthcare provider”.

You should also inform your child's coach and/or Athletic Director if you think that your child may have a concussion Remember it's better to miss one game than miss the whole season. When in doubt, the athlete sits out.
